**Seize the opportunities in  
cross-border intraday trading,  
balancing and scheduling.**

**BRADY.**

## Expertise in Logistics

**Industry-leading expertise in logistics is one of Brady Energy's four core knowledge areas. Together with trading & risk management, data management and settlement our solutions provide you with an insight-driven approach designed to enhance your business efficiencies.**

### **Are you ready for the new cross-border intraday challenges?**

In Europe's liberalised energy market, trading and power scheduling/nomination across multiple markets present numerous challenges. In order to remain competitive and profitable, you need to be able to communicate with the relevant market participants in close to real time as well as having a clear view of your balancing situation.

The challenge is that market participants are faced with different formats when exchanging data with transmission system operators (TSOs) and their partners across borders or grids. These differences slow down the process and raise costs which can potentially lead to risk through imbalances and penalty fees.

In such a complex market, how do you manage your risks when trading across multiple borders in multiple standards? Do you have a real-time view of the balances in your system to help you make informed, intraday decisions? Do you have an integrated solution that includes both power and gas scheduling? Are you equipped with the automated administrative tools that can expedite the handling of different message protocols?

### **A powerful solution, modular design**

To address these challenges, Brady plc, has developed the most advanced solution of its kind in the market: the Brady Energy Balancing and Scheduling solution. This is a powerful often interdependent balancing and scheduling tool – ideal for automated, efficient and low-cost intraday trading across borders. Moreover, it is the only integrated solution on the market today that provides both gas and power scheduling.

Brady's Energy Balancing and Scheduling solution uses a central platform to handle the different message protocols in Europe. It also automates the entire scheduling workflow process, enabling easy implementation of market specific rules across multiple borders or domestically. More recently, we added the ability to view your balancing situation for day ahead and intraday asset backed power trading – a vital tool in a market where every margin counts.

---

## Key benefits

- Facilitates intraday trading and scheduling across multiple borders
- Provides close to real-time balance viewing for profitable decision-making
- Automated administrative tasks significantly reduce time and costs
- Combines balancing and scheduling solutions for both power and gas
- Open platform supports many different standards

## Automated scheduling streamlines day-to-day tasks

Are you repeatedly performing administrative tasks such as:

- Typing up and reformatting data
- Importing data
- Exporting results and logging into an FTP server to upload these to the relevant TSO

Brady's Energy Balancing and Scheduling solution will save you three to four hours a day by automating these manual tasks.

With this automated solution, you can utilise our user-friendly interface, which provides a comprehensive overview of your entire scheduling workflow and status as well as access to step-by-step guidance through the process. You can also drill down to any level of detail.

## Integrate with any ETRM system

Brady's Energy Balancing and Scheduling solution functions as a stand-alone solution or as an integrated part of your ETRM system. When used with Brady's ETRM system, installing the solution is as simple as plug-and-play. We also have extensive experience in connecting our modules with other ETRM systems.

To gain a real edge in intraday trading across multiple markets using different formats, choose Brady's Energy Balancing and Scheduling solution.

## Secure a profitable path forward

Why not secure a profitable path forward by choosing a provider with a successful track record in cross-border trading solutions and a unique understanding of the energy business and where it is going?

## Solutions and services

With expertise built upon an open platform of solutions and services, our offering can improve your business processes and help you achieve a higher level of business efficiency.

Like our other solutions, logistics is delivered through a variety of vehicles designed to meet your specific needs such as hosting, cloud-based services or as a local installation.

## About Brady plc

Brady plc is the largest European-headquartered provider of trading and risk management software to the global commodity and energy markets. Brady combines fully integrated and complete solutions supporting the entire commodity trading operation, from capture of financial and physical trading, through risk management, handling of physical operations, back office financials and treasury settlement, for energy, refined and unrefined, ferrous and non-ferrous metals, soft commodities and agricultural products.

Brady has over 30 years' expertise in the commodity markets with more than 10,000 users at over 200 companies worldwide, who depend on Brady's software solutions to deliver vital business transactions across their global operations. Brady clients include many of the world's largest financial institutions, trading companies, miners, refiners, scrap processors, producers, tier one banks and a large number of London Metal Exchange (LME) Category 1 and 2 clearing members and many leading European energy generators, traders and consumers.
