
Spot Bidding

Your gateway to the world of power auctions providing you full visibility to control all bids.

BRADY.

This fully automated tool conveniently integrates into the EPEX trading platform saving you time and money. With Brady's spot bidding module you will be able to spend more time on your core business activities and less on managing data.

In a nutshell

The spot bidding module works within Brady's existing EDIS module supporting all linear and stepwise bids submitted into EPEX auctions. It boasts a two-way communication for bid submission and market results import. This is a module which can be integrated with any ETRM system (and Brady's EDM solution).

For portfolio managers

Spot bidding provides managers real time up-to-date position management of their portfolio.

For power traders

Spot bidding enables the power trader to observe all bids submitted into auctions, from a single point of control. Power traders can now benefit from data synchronisation allowing for greater efficiency in their transactions, time and data management.

Functionality overview

- Bidding process
- Observe market
- Monitor your position
- Calculate bids and orders
- Market communications status and log
- Trade Limits Configuration
