# Brady's M7 Messaging Adapter

---

Receive real-time intraday  
trading market data from M7

**BRADY.**

## Integrates with the M7 API provided by EPEX

Brady's M7 Messaging Adapter (API) offers automatic deal capturing for EPEX intraday trading as an adapter for Brady products. It is a real-time communication channel which can be used by market participants to receive specially formatted standardised messages from M7 and offers deal capturing for intraday trading.

### What is Brady's M7 adapter?

The component integrates with the M7 API provided by EPEX following all the technical requested guidelines.

Where M7 is an API for continuous intraday trading in:

- Austria
- Belgium
- France
- Germany
- Ireland
- The Netherlands
- Switzerland
- United Kingdom

The integration is designed to be real-time and combines a set of messages published via the API to track **Own Trades** executed on the market providing Brady solutions read only access to trade data:

- Contract information (delivery dates)
- Price
- Volume data

Brady M7 has been certified as an independent software vendor solution. A customer of Brady using the M7 adaptor is not required to pass such certifications again.

### What does it do?

The API can receive the following M7 data (read-only):

- Trade data (contract information/ price/volume)
- Market data (order book/own order/own trade)
- Reference data (market status/ trading limit)

Over and above the EPEX markets, M7 also interacts with XBID which gives access to the shared order book of all XBID's regions. XBID includes the following power exchanges:

- EMCO (previously Nord Pool)
- EPEX SPOT (including former APX and Belpex)
- GME
- OMIE

### How does the data flow
